Quantity Formula

When only Front End Packs[™] are used for a pull, the number of packs recommended for a pull is:

$N = 0.003 \times T \times L \times D$

N = Number of packs required

T = (1) for J-55/J-110 packs or (2) for J-27/J-99 packs

L = Length of pull in feet

D = Nominal I.D. of conduit in inches

The quantity appropriate for a difficult pull may be up to +50% above this average, depending on conduit fill, conduit type and condition, number of bends, and pulling environment.
